

RF exposure information according to FCC CFR 47 part 15, §15.247(i), part 2, §2.1093

The remote keypad is a portable device operating in 912.750 – 919.106 MHz band. It is equipped with an integrates internal antenna.

No SAR evaluation required if a transmitter power is below the following low threshold:

$$60/f \text{ (GHz) [mW]} = 60/0.915863 \text{ [mW]} = 65.5 \text{ [mW]}.$$

Tunable range, GHz		Center of tunable band, GHz	60/f SAR limitation, mW
Flow	Fhigh		
0.912750	0.919106	0.915863	65.5

Maximum measured transmitter power:

P _{out} conducted		Maximum antenna gain, dBi	P _{out} EIRP	
dBm	mW		dBm	mW
24.5	282	-8	16.5	44.7

According to the manufacturer's declaration in every 6 min the device transmits 2 supervision messages of 6 ms duration each and 2 messages following a key press of 10 ms duration each. Total duration is 32 ms. The duty cycle is 9×10^{-5} .

Maximum conducted power is 282 mW.

Equivalent conducted power is $282 \text{ mW} \times \text{duty cycle} = 282 \text{ mW} \times 9 \times 10^{-5} = 254 \times 10^{-4} \text{ mW}$.

Threshold for no SAR evaluation is 65.5 mW.

Conclusion: No SAR evaluation is required since the maximum transmitter radiated power is below the FCC threshold.
